New safeguarding tools to protect your students online

Safeguarding students both proactively and reactively as they use technology is fast becoming one of the most important concerns across schools worldwide. It's now central to the new Government proposals announced on 22nd December 2015 to strengthen the current **Prevent duty** legislation.

IT asset management solution, NetSupport DNA, not only provides a school-wide overview of all IT assets and activity with its comprehensive hardware & software inventories and licence management modules; but also includes a **safeguarding module** that's been developed with teachers, safeguarding leads and local authorities to ensure your school's safeguarding policy is truly effective.

NEW - Keyword and Phrase monitoring

Using a database of pre-supplied keywords and phrases in multiple languages covering a range of safeguarding issues, it provides insight into and alerts from any activity by a student including those learning English as a 2nd language, that might suggest that they are engaged in activity that would place them at risk.

NEW - 'Report a Concern' feature

Allows students to report concerns directly and discreetly to nominated school staff and includes the option to attached documents to evidence their concern. Teachers are alerted instantly, allowing them to track the concern and record any follow up actions directly from within DNA.
