

Smoothwall Cloud Filter

Smoothwall Cloud Filter means you can now take your web filtering out of the server room and onto the client machine.

This offers a number of distinct advantages

Extend student protection

Filter all managed devices on or offsite, and so extend student protection to the home not just in school.

Faster installation

Benefit from faster and easier installation as well as more robust user authentication.

Full incident reporting

Report on 100% of data and so create a full contextual picture around any safeguard incident.

Faster reporting

Enables faster, investigative reporting than on-premise. Of particular value to customers with large data sets.

Simplified content filtering

Achieve real-time, content aware filtering without the complexity of man-in-the-middle decryption, certificates or exceptions.

Complete user visibility

Achieve complete user visibility with simple authentication of all traffic and all users.

Safe & fast internet access

Eliminate single point of failure for filtered internet access giving intrinsic scalability and reliability.

New features - Coming soon

We are committed to keeping our customers one step ahead in the evolving world of digital safety. We are continually developing our solutions therefore. It's a rigorous process. It also means we'll be adding four new exciting developments to Cloud Filter in 2019.

Azure Active Directory integration (Spring/Summer 2019)

No longer just tying into on-premise user directories, we will soon be expanding the number of directories Cloud Filter talks to including native user directories such as Azure AD, and Google. This will be an ideal support to those customers transitioning to full cloud.

High performance reporting (Spring/Summer 2019)

A series of summary reports will enable customers to see key metrics quickly. This includes trends on web browsing and filtering, plus others.

New user interface (Summer 2019)

User experience will be improved with a cleaner, simpler and more streamlined UI. Policy management will become quicker and blocklists and allow lists will be incorporated into the main UI for easier access.

Full cloud reporting (Summer 2019)

All customers, on-premise included, will benefit from fast, rich analysis, reports and dashboards, with no need for extra hardware of enhanced resource specs.
